SUMMARY

Senior Full Stack Engineer with 7+ years building and operating FinTech and Web3 platforms serving 3M+ users. Builds event-driven microservices in **Node.js/NestJS** and **Python (Django, FastAPI)** over gRPC and REST, with **React** and **Next.js** frontends, OAuth2/OpenID Connect SSO, PostgreSQL and Redis, in cloud-native deployments with Docker and CI/CD on AWS and GCP. Ships production agentic AI: a multi-agent LangGraph assistant (planner/router, RAG, SQL-agent subgraph) and an MCP-based PR-review agent. Hands-on with Kubernetes, Apache Kafka, RabbitMQ, OpenTelemetry, Prometheus, Grafana, k6 and PostgreSQL scaling: replication, partitioning, Citus sharding and Barman point-in-time recovery (PITR).

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Go, Solidity, HTML5, CSS3

Frontend: React.js, Next.js, Redux, Zustand, Tailwind CSS, Material UI, Storybook, Angular

Backend: Node.js, NestJS, Express, Django, Django REST Framework (DRF), FastAPI, TypeORM, SQLAlchemy, Mongoose, RESTful APIs (JSON), gRPC, GraphQL, WebSockets (Socket.IO), OpenAPI/Swagger, Apache Kafka, RabbitMQ, BullMQ, Celery, Redis Pub/Sub

Databases (SQL & NoSQL): PostgreSQL (replication & read replicas, partitioning, Citus sharding, Barman PITR), Redis, MongoDB, pgvector, Qdrant, Data Modeling & Schema Design, Query Optimization, Indexing

Architecture: Microservices, Distributed Systems, Event-Driven Architecture, System Design, Scalability, High Availability, Performance Optimization, Caching, Idempotency, Transactional Outbox, Saga pattern, Temporal, Clean Code, SOLID, Authentication & Authorization (OAuth2, OpenID Connect, RBAC), Rate Limiting, Agile/Scrum

AI Engineering: Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), AI Agents, Multi-Agent Systems, SQL Agents, LangChain, LangGraph, LangSmith, LangSmith Studio, Gradio, Model Context Protocol (MCP), OpenAI Agents SDK, CrewAI, Claude Agent Skills, LlamaIndex, LiteLLM, Embeddings, Cross-Encoder Reranking, LLM Evaluation, Prompt Engineering, Tool/Function Calling, Fine-tuning (QLoRA), Hugging Face, OpenAI, Claude Code (Anthropic), CLAUDE.md / AGENTS.md

FinTech & Web3: KYC/AML (SumSub), Digital-Asset Custody (Fireblocks), Crypto Wallets, Ethereum, Solana, Hardhat, Viem, Account Abstraction (ERC-4337), Metaplex, Settlement and Reconciliation

DevOps & Cloud: AWS (EC2, ECS, ECR, Fargate, S3, Route 53), GCP, Azure (AKS, ACR), Docker, Kubernetes (K8s), GitHub Actions, GitLab CI, CI/CD, Nginx (reverse proxy / API gateway), Cloudflare, Git, Linux

Observability & Testing: OpenTelemetry, Prometheus, Grafana, Sentry, OpenObserve, Distributed Tracing, k6 (load testing), Jest, Mocha, Automated Testing (Unit & Integration), Structured Logging

EXPERIENCE

Senior Full Stack Engineer, LMNTO Performance Information Technology 05/2023 – present | Dubai, UAE

- Architected and operate 3 interconnected FinTech/Web3 platforms serving 3M+ users, built as event-driven microservices in **NestJS** and **Django** communicating over **gRPC**.
- Designed centralized **OAuth2/OpenID Connect** single sign-on across all 3 Web applications (authorization code flow with PKCE, scopes, JWT access/refresh/ID tokens, **RBAC**), cutting auth-related support tickets 30%.
- Designed an immutable snapshot → intent → settlement data pipeline for high-volume reward and bonus payment transaction processing, handling 100+ payouts/sec. Versioned snapshots make every run auditable, resumable and re-computable when inputs change.
- Built an internal **multi-agent AI assistant** (chatbot) integrating LLM inference that answers how a feature is implemented, what its PRD specifies and why an issue is happening for a specific user. Customer support now resolves user cases without escalating to product or engineering.
- Architected it with **LangGraph, LangChain** and FastAPI: query understanding → planner/router → specialist agents with tool calling (**pgvector** RAG over implementation docs and PRDs, a SQL-agent subgraph over a **SQLAlchemy** data access layer, knowledge-base tools) → response synthesizer, with error handling and fallback routing when an agent fails. Traced and debugged with **LangSmith** and **LangSmith Studio**.
- Agents run with read-only, scoped tool permissions and PII redaction, with guardrails against prompt injection.

- **NodeLink (DePIN rewards):** built the NestJS + **PostgreSQL** backend integrating third-party services (SumSub KYC/AML, BoldSign e-signatures) through rate-limited connectors with retries, plus **MinIO** object storage, asynchronous processing with **BullMQ** background jobs and Socket.IO real-time updates, scaled horizontally via a Redis adapter.
- **Zenit World (copy-trading, 3M+ users):** Django + PostgreSQL platform with Fireblocks digital-asset custody, SumSub KYC/AML, fiat/crypto wallets for the ZENIT token, staking, yield farming, automated copy-trading and Celery + Redis audit logging.
- **Web3 SSO & Wallet Platform:** Viem wallet-gateway microservice with Account Abstraction (Biconomy, Alchemy), Merkle-tree reward-eligibility proofs, a referral graph and gRPC cross-platform sync.
- Built a double-entry ledger where transactions flow through **Kafka** via a transactional outbox. It runs on PostgreSQL sharded with **Citus**, partitioned by month, replicated to a **read replica** and backed up with **Barman PITR** (restore tested)
- Cut API latency 45% with Redis caching and maintained 99.95% uptime troubleshooting production issues end to end with structured logging, metrics and distributed tracing in **OpenObserve**, with **Sentry** error monitoring.
- Drove design and code reviews and architecture decision records (ADRs) and technical documentation and mentored developers in a cross-functional team of 4 developers, 2 QA, a team lead, and product and project managers.
- Published **open-source NestJS packages** (nestjs-minio-backend, nestjs-dynamic-filter) as reusable libraries for MinIO storage and dynamic query filtering.

Senior Full Stack Developer, Coolshop SRL 11/2022 – 05/2023 | Dubai, UAE
Automotive · Configurator Products
- Built highly interactive configurator products — **CaseIH Build & Price** and Cool-Model-Selection — from scratch with **React 18, TypeScript, GraphQL, Apollo, Storybook and Styled Components**; server-side rendering for SEO and load time; reused across 5+ region-specific deployments.
- Designed and consumed GraphQL and REST APIs with Apollo Client; built fully responsive, accessible UIs and translated business requirements into features with product and design teams in a fast-paced Agile environment.
- Containerized frontend services with Docker and integrated performance monitoring to track Core **Web Vitals** and runtime regressions.
- Reduced **frontend load times 60%** via bundle optimization and code splitting; raised dev **velocity 40%** with reusable component libraries; Jest unit testing.
- Cut deployment time from **2 hours to under 10 minutes** with GitHub Actions CI/CD.

Full Stack Blockchain Developer, Connectopia 04/2022 – 10/2022 | Dubai, UAE
Web3 · NFT
- Built Ethereum smart contracts, minting pages and an NFT launchpad (MERN + Alchemy API).
- Led an Agile team of 5, delivering **12 features across 6 sprints.**
- Processed **50K+ on-chain transactions** with zero contract vulnerabilities.

Full Stack Developer, Stead Technologies LLP 12/2020 – 04/2022 | Bangalore, India
Product Studio · SaaS
- **BoxedCMS**: plug-and-play custom CMS (Angular 11 + Node.js) with **CKEditor** authoring, **Passport.js** local/social login + 2FA, multilingual content and dynamic theme uploads — improved client **publishing time 70%**.
- Built on the MERN stack (MongoDB, Express, React, Node.js) with RESTful APIs and Redis caching for session and content delivery.
- **Spovio (HRMS)**: React + Django, used by **10+ businesses managing 1,200+ employees**; time-off, attendance and payroll modules, Redis + Celery, AWS S3, email/SMS — **automated 80% of HR workflows**.
- **Puretax**: multi-tenant Django + DRF backend with **QuickBooks Online sync**, Redis + Celery; **600+ reports/month** in PDF/XLSX/CSV.
- Launched an **open-source** calendar library with **100+ weekly** npm downloads.

Junior Software Developer, AgileCrew 08/2019 – 12/2020 | Kozhikode, India
E-commerce · Real-Time
- Built MERN e-commerce and real-time meeting platforms on AWS EC2.
- Built a Python/FastAPI microservice for order notifications and inventory sync, processing 10K+ events/day alongside the core MERN stack.
- Supported **2,000 concurrent users** over WebSockets.
- Enabled **500+ secure checkouts/day**.

EDUCATION

B.Tech Computer Science, MES College of Engineering 2015 – 2019 | Calicut, India
